

Week 7 Discussion: Articulations and Joints

Required Resources

Read/review the following resources for this activity:

- Textbook reading
- Lesson
- Minimum of 1 scholarly source

In your reference for this assignment, be sure to include both your text/class materials AND your outside reading(s).

Initial Post Instructions

One of the main themes of this course (as well as the entire A&P series) is the relationship between structure and function (i.e. anatomy and physiology). You are currently learning about the structure and functions of joints. In this discussion, address the following topics:

- How does the structure of a joint play a role in its stability?
- How does the function of a joint play a role in its mobility?
- How does stability relate to mobility?
- Propose a rationale for why shoulder dislocations are the most common type of joint injury?

Follow-up Post Instructions

Response to at least one peer or the instructor. Further the dialogue by providing more information and clarification.
