Question 1

1 / 1 pts

Susan is a 29 y/o female who comes to the clinic with a 3-day history of fever, chills, nausea, vomiting, and flank pain. During the visit, the NP does a urine dipstick and discover that Susan is positive for nitrites, leukocytes, and >10 WBCs. The physical exam reveals a CVA tenderness. Within 2 weeks, Susan returns to the clinic and a culture of her urine shows she has the same bacteria as when the NP first saw her. This would be referred to as:

Relapsing UTI

Recurring UTI

Persistent UTI

None of the above

Question 2

1 / 1 pts

What is the earliest age at which one would not give DTap to a child but rather would give Td or Tdap?

1 year old

2 years old

3 years old

7 years old
