• Question 2

5 out of 5 points

What kind of study is described in the following excerpt?

Researchers are interested in studying the impact of living in a family where a child has been diagnosed with cancer. They collaborate with the oncology department at a large children's hospital to identify and receive consent from families that have a child with a cancer diagnosis. Participants are consented and data is collected and triangulated using one-on-one interviews, focus groups, and surveys. Data is analyzed for thematic analysis.

- A.
Quantitative research

- B. Qualitative research
- C. Mixed-methods research
- D. Systematic reviews
- E. Literature reviews
- F. Cohort studies

Question 5

5 out of 5 points

What type of study is described in the following excerpt?

Surveys to evaluate nurse satisfaction, medical errors, depression and anxiety, and demographics were given to 5,432 nurses from hospitals of various sizes and geographic locations; some had nurses working 8-hour shifts and 12-hour shifts. Nurses were asked to complete the survey. Upon completion of the survey, nurses were invited to participate in video conference focus groups and one-on-one interviews with a research assistant by video conferencing. Survey results were reported using descriptive statistics,
