

## **Week 2 Discussion 1: MidWeek Comprehension Questions**

This week's lesson and graded assignment are opportunities for you to evaluate your own competencies in order to better understand nursing informatics and enhance your knowledge and skills. Competency assessment is an on-going process. You might be quick to assume that your competencies will always increase. Be mindful of barriers and challenges as you reflect on this topic. As you progress in this course, in the program, and beyond, how might you expect your competencies to evolve? Provide a brief response (100 words or less)

### **Answer:**

As I progress in the course, program and beyond, I expect my competencies will evolve. Overall, I expect my competency in informatics and healthcare technology to become more advanced upon completion of this course. I will have a better understanding of using patient-care technologies to deliver and enhance care as well as the ability to use communication technologies to integrate and coordinate care and I will be able to use informatics to make changes in my care environment which will improve health outcomes. Furthermore, I hope that my competencies each week will improve however; I expect that some weeks will be better
