

NR 599 Week 7 Discussion 2: Post TANIC Self-Assessment and Reflection Post

1. Regarding the Post-TANIC Self-Assessment for this week, how does your competency level compare to the Week 2 Self-Assessment?
2. Which competencies do you think may benefit you in your future role as an APN and why?
3. As discussed in the lesson this week, healthcare providers must be competent in informatics in order to make ethical decisions about informatics technologies and patients' intimate healthcare data and information. To the extent that information technology is reshaping healthcare practices or promises to improve patient care, healthcare professionals must possess certain competencies which will assist with consistency and quality. Which competencies did you achieve in this course? Explain

After comparing week two's Post-TANIC Self-Assessment to this week's assessment, I went from scoring mostly proficient to now scoring mostly expert on the scoring guide.

The nursing informatic TIGER competency model consist of three main parts which include: basic computer competencies, information literacy, and information management (HIMSS, 2017). I believe all three competencies within this model are pertinent and will benefit us greatly within the healthcare field. The competency I chose within the TIGER model that I think would most benefit from in my future role as a nurse practitioner is information management, which includes use of the electronic health care
