

**Week 6 - Pregnancy & Pediatric Mental Health due date
06/08/23**

1-Children with this disorder "annoy others". This disorder is associated with defiance, blaming others and arguing with adults or authority figures.

Oppositional Defiant disorder

2-A 10-year-old girl is referred for evaluation of behavioral difficulties. Her teachers report that she is easily distracted and fails to complete any class work, and often stares off into space or tries to chat with her neighbor. Her mother reports that mornings are the most difficult because of her general disorganization and forgetfulness. Otherwise she is socially engaged and enjoys many activities. Which of the following is the most likely diagnosis?

Attention deficit disorder

3-An 8-year-old boy presents with nocturnal enuresis, which persists despite behavioral interventions including eliminating fluid intake in the evening, scheduled awakening at night to use the
